

CDP 2020: Mercialys maintains its “A List” ranking for the third consecutive year

With the Carbon Disclosure Project (CDP)* 2020 results, Mercialys is once again ranked in the Climate “A List”, which recognizes the world’s most active companies in the fight against climate change. This recognition highlights Mercialys’ sustained ambition to reduce its carbon footprint and ensure environmental transparency.

By maintaining its “A List” ranking for the third consecutive year, Mercialys has confirmed its position as one of the top 3% of companies leading the fight against climate change, out of more than 9,600 international participants for CDP 2020 (up 14% from last year).

More specifically, this ranking acknowledges Mercialys’ exhaustive environmental reporting and its ambitious goals for reducing greenhouse gas emissions, as illustrated by the scientific certification of its carbon roadmap by the Science Based Targets initiative (SBTi)** in 2019 or its actions to reduce energy consumption and diversify its energy mix. By taking part in this questionnaire - whose answers are made public - for the past four years, Mercialys is also setting out its support for collective efforts to promote transparency and access to reliable and comparable environmental data to benefit CDP’s 515 member investors and more generally all of its stakeholders.

This latest recognition follows on from Mercialys’ multiple achievements in 2020 (continued “Green Star” rating with GRESB, Grands Prix de la Transparence All Categories Award and two EPRA Gold Awards), reaffirming Mercialys’ commitment to maintaining the same level of performance while renewing its CSR strategy, with its targets and commitments to be announced during the first half of 2021.

**Carbon Disclosure Project (CDP): international not-for-profit organization that assesses, based on environmental data collected each year, how businesses, territories and organizations impact climate change, water and forests.*

***The Science Based Targets initiative (SBTi): international non-profit organization that assesses, based on criteria defined by scientific experts, the alignment between the greenhouse gas emission reduction targets set by companies and the recommendations of the Intergovernmental Panel on Climate Change (IPCC), in order to ensure that these targets effectively limit the increase in global temperatures to 2°C by 2050 compared with 1990.*
